

## **Concussion Information**

A concussion is a neurologic injury which causes a temporary disturbance in brain cells that comes from and is the result of an extreme acceleration or deceleration if the brain within the skull. The common misconception is that you must be hit in the head to cause a concussion injury – this is not true! Because a concussion is the result of acceleration or deceleration of the brain, a concussion can happen with a significant blow to anywhere on the body, provided sufficient acceleration/deceleration is transmitted to the brain tissue, head or face, there may be no other visible signs of a brain injury. It can cause changes in the brain that may not be seen in a CT scan or X-Ray. Balance, reaction time and cognitive skills can also be impacted.

## What are the signs and symptoms of a concussion?

Symptoms of a concussion range from mild to severe and can last for or appear within hours, days, weeks, or even months. In some cases, there may be no symptoms at all. If you suspect a concussion, or notice any of the symptoms listed below, contact your doctor immediately. In severe cases, proceed to an Urgent Care Centre or Emergency Room immediately.

## Common signs and symptoms

| Physical                                    | Cognitive              | Emotional                  | Sleep-Related         |
|---|------------------------|----------------------------|-----------------------|
| Headache                                    | Not thinking clearly • | Irritability (easily upset | Sleeping more or less |
| <ul> <li>Pressure in the head</li> </ul>    | Slower thinking        | or angered)                | than usual            |
| Dizziness                                   | Feeling confused       | Depression                 | Having a hard time    |
| Nausea or vomiting •                        | Problems concentrating | Sadness                    | falling asleep        |
| Blurred vision                              | Problems remembering   | Nervous or anxious         |                       |
| <ul> <li>Sensitivity to light or</li> </ul> |                        |                            |                       |
| sound                                       |                        |                            |                       |
| <ul> <li>Ringing in the ears</li> </ul>     |                        |                            |                       |
| Balance problems                            |                        |                            |                       |
| Tired or low energy                         |                        |                            |                       |
| • Drowsiness                                |                        |                            |                       |

## **Approved Concussion Testing Facility**
